

Preface	xv
1 What This Book Is About	1
2 Mathematical Preliminaries	5
2.1 Linear Spaces	5
2.2 Vectors and Vector Spaces	7
2.3 Basis Functions	9
2.3.1 Orthogonality and Biorthogonality	10
2.4 Local Basis and Riesz Basis	13
2.5 Discrete Linear Normed Space	15
2.6 Approximation by Orthogonal Projection	16
2.7 Matrix Algebra and Linear Transformation	18
2.7.1 Elements of Matrix Algebra	18
2.7.2 Eigenmatrix	19
2.7.3 Linear Transformation	20
2.7.4 Change of Basis	21
2.7.5 Hermitian Matrix, Unitary Matrix, and Orthogonal Transformation	22
2.8 Digital Signals	23
2.8.1 Sampling of Signal	23
2.8.2 Linear Shift-Invariant Systems	24
2.8.3 Convolution	24
2.8.4 z-Transform	25
2.8.5 Region of Convergence	26
2.8.6 Inverse z-Transform	28
2.9 Exercises	29
References	30
3 Fourier Analysis	31
3.1 Fourier Series	31
3.2 Examples	32
3.2.1 Rectified Sine Wave	32
3.2.2 Comb Function and the Fourier Series Kernel $K_N(t)$	33
3.3 Fourier Transform	35
3.4 Properties of the Fourier Transform	37
3.4.1 Linearity	37
3.4.2 Time Shifting and Time Scaling	38
3.4.3 Frequency Shifting and Frequency Scaling	38
3.4.4 Moments	38
3.4.5 Convolution	39
3.4.6 Parseval's Theorem	40
3.5 Examples of the Fourier Transform	40
3.5.1 Rectangular Pulse	41
3.5.2 Triangular Pulse	41
3.5.3 Gaussian Function	42
3.6 Poisson's Sum	43
3.6.1 Partition of Unity	45
3.7 Sampling Theorem	46
3.8 Partial Sum and the Gibbs Phenomenon	49
3.9 Fourier Analysis of Discrete-Time Signals	50
3.9.1 Discrete Fourier Basis and Discrete Fourier Series	50
3.9.2 Discrete-Time Fourier Transform	52
3.10 Discrete Fourier Transform	54

3.11 Exercises	55
References	56
4 Time-Frequency Analysis	57
4.1 Window Function	58
4.2 Short-Time Fourier Transform	60
4.2.1 Inversion Formula	61
4.2.2 Gabor Transform	61
4.2.3 Time-Frequency Window	62
4.2.4 Properties of STFT	62
4.3 Discrete Short-Time Fourier Transform	64
4.3.1 Examples of STFT	64
4.4 Discrete Gabor Representation	65
4.5 Continuous Wavelet Transform	67
4.5.1 Inverse Wavelet Transform	69
4.5.2 Time-Frequency Window	70
4.6 Discrete Wavelet Transform	72
4.7 Wavelet Series	73
4.8 Interpretations of the Time-Frequency Plot	74
4.9 Wigner-Ville Distribution	76
4.10 Properties of the Wigner-Ville Distribution	80
4.10.1 A Real Quantity	80
4.10.2 Marginal Properties	80
4.10.3 Correlation Function	81
4.11 Quadratic Superposition Principle	81
4.12 Ambiguity Function	83
4.13 Exercises	84
4.14 Computer Programs	85
4.14.1 Short-Time Fourier Transform	85
4.14.2 Wigner-Ville Distribution	86
References	88
5 Multiresolution Analysis	89
5.1 Multiresolution Spaces	89
5.2 Orthogonal, Biorthogonal, and Semiorthogonal Decomposition	92
5.3 Two-Scale Relations	96
5.4 Decomposition Relation	97
5.5 Spline Functions	98
5.5.1 Properties of Splines	102
5.6 Mapping a Function into MRA Space	103
5.7 Exercises	104
5.8 Computer Programs	106
5.8.1 B -Splines	106
References	107
6 Construction of Wavelets	108
6.1 Necessary Ingredients for Wavelet Construction	109
6.1.1 Relationship Between Two-Scale Sequences	109
6.1.2 Relationship Between Reconstruction and Decomposition Sequences	110
6.2 Construction of Semiorthogonal Spline Wavelets	112
6.2.1 Expression for $\{g_o[k]\}$	113
6.3 Construction of Orthonormal Wavelets	114
6.4 Orthonormal Scaling Functions	118

6.4.1 Shannon Scaling Function	118
6.4.2 Meyer Scaling Function	119
6.4.3 Battle-Lemarie Scaling Function	123
6.4.4 Daubechies Scaling Function	125
6.5 Construction of Biorthogonal Wavelets	129
6.6 Graphical Display of Wavelets	132
6.6.1 Iteration Method	132
6.6.2 Spectral Method	132
6.6.3 Eigenvalue Method	134
6.7 Exercises	134
6.8 Computer Programs	138
6.8.1 Daubechies Wavelet	138
6.8.2 Iteration Method	139
References	139
7 Discrete Wavelet Transform and Filter Bank Algorithms	141
7.1 Decimation and Interpolation	141
7.1.1 Decimation	142
7.1.2 Interpolation	144
7.1.3 Convolution Followed by Decimation	147
7.1.4 Interpolation Followed by Convolution	147
7.2 Signal Representation in the Approximation Subspace	148
7.3 Wavelet Decomposition Algorithm	149
7.4 Reconstruction Algorithm	153
7.5 Change of Bases	154
7.6 Signal Reconstruction in Semiorthogonal Subspaces	156
7.6.1 Change of Basis for Spline Functions	157
7.6.2 Change of Basis for Spline Wavelets	160
7.7 Examples	163
7.8 Two-Channel Perfect Reconstruction Filter Bank	165
7.8.1 Spectral-Domain Analysis of a Two-Channel PR Filter Bank	168
7.8.2 Time-Domain Analysis	176
7.9 Polyphase Representation for Filter Banks	180
7.9.1 Signal Representation in the Polyphase Domain	180
7.9.2 Filter Bank in the Polyphase Domain	181
7.10 Comments on DWT and PR Filter Banks	182
7.11 Exercises	183
7.12 Computer Programs	184
7.12.1 Algorithms	184
References	186
8 Fast Integral Transform and Applications	187
8.1 Finer Time Resolution	188
8.2 Finer Scale Resolution	190
8.3 Function Mapping into the Inter octave Approximation Subspaces	194
8.4 Examples	196
8.4.1 IWT of a Linear Function	197
8.4.2 Crack Detection	202
8.4.3 Decomposition of Signals with Nonoctave Frequency Components	203
8.4.4 Perturbed Sinusoidal Signal	203
8.4.5 Chirp Signal	204
8.4.6 Music Signal with Noise	204
8.4.7 Dispersive Nature of the Waveguide Mode	205

References	209
9 Digital Signal Processing Applications	210
9.1 Wavelet Packets	211
9.2 Wavelet Packet Algorithms	212
9.3 Thresholding	214
9.3.1 Hard Thresholding	216
9.3.2 Soft Thresholding	217
9.3.3 Percentage Thresholding	218
9.3.4 Implementation	218
9.4 Interference Suppression	219
9.5 Faulty Bearing Signature Identification	221
9.5.1 Pattern Recognition of Acoustic Signals	221
9.5.2 Wavelets, Wavelet Packets, and FFT Features	226
9.6 Two-Dimensional Wavelets and Wavelet Packets	228
9.6.1 Two-Dimensional Wavelets	228
9.6.2 Two-Dimensional Wavelet Packets	231
9.7 Wavelet and Wavelet Packet Algorithms for Two-Dimensional Signals	233
9.7.1 Two-Dimensional Wavelet Algorithm	233
9.7.2 Wavelet Packet Algorithm	234
9.8 Image Compression	235
9.8.1 Image Coding	235
9.8.2 Wavelet Tree Coder	236
9.8.3 EZW Code	238
9.8.4 EZW Example	239
9.8.5 Spatial-Oriented Tree	242
9.8.6 Generalized Self-Similarity Tree	244
9.9 Microcalcification Cluster Detection	244
9.9.1 CAD Algorithm Structure	244
9.9.2 Partitioning of Image and Nonlinear Contrast Enhancement	245
9.9.3 Wavelet Decomposition of the Subimages	245
9.9.4 Wavelet Coefficient Domain Processing	246
9.9.5 Histogram Thresholding and Dark Pixel Removal	248
9.9.6 Parametric ART2 Clustering	248
9.9.7 Results	249
9.10 Multicamer Communication Systems	249
9.10.1 OFDM Multicamer Communication Systems	250
9.10.2 Wavelet Packet-Based MCCA	252
9.11 Three-Dimensional Medical Image Visualization	252
9.11.1 Three-Dimensional Wavelets and Algorithms	255
9.11.2 Rendering Techniques	256
9.11.3 Region of Interest	258
9.11.4 Summary	258
9.12 Computer Programs	258
9.12.1 Two-Dimensional Wavelet Algorithms	258
9.12.2 Wavelet Packets Algorithms	263
References	265
10 Wavelets in Boundary Value Problems	267
10.1 Integral Equations	268
10.2 Method of Moments	272
10.3 Wavelet Techniques	273
10.3.1 Use of Fast Wavelet Algorithm	273
10.3.2 Direct Application of Wavelets	274

10.3.3 Wavelets in Spectral Domain	275
10.3.4 Wavelet Packets	280
10.4 Wavelets on the Bounded Interval	280
10.5 Sparsity and Error Considerations	282
10.6 Numerical Examples	285
10.7 Semiorthogonal Versus Orthogonal Wavelets	291
10.8 Differential Equations	294
10.9 Expressions for Splines and Wavelets	295
References	297
Index	301
